

# Wallbox & Get Charging

Wallbox and Get Charging work together to enhance EV charging on Business environments

## **At Wallbox, we are fully committed to the adoption of electric vehicles and green energy use.**

To carry this mission forward, we work alongside the best electric vehicle charging installation experts to connect businesses worldwide with the right charging solutions.

Recently, we partnered with Get Charging in the UK to move towards a more sustainable future. Get Charging helped install a cost-effective, versatile, and aesthetic EV charging solution for Queensberry Design Ltd. parking without interrupting their daily office operations. The bar was set high, but joining forces with Get Charging, we faced this new challenge!

# The idea

**To help Queensberry Design Ltd. swiftly transition to clean energy transportation and reduce its carbon footprint.**

Queensberry Design Ltd. was looking to partner up with a supplier who could offer high quality EV Business Chargers and easy installation, which is why they joined forces with Get Charging, a leading EV charge point supply and installation specialist in the UK. Get Charging was able to provide an aesthetic and reliable charging solution, as well as a carefully assessed installation service.

This collaboration demonstrates how beneficial setting up an EV charging site can be for businesses in the UK. A significant step forward in promoting e-mobility for companies nationwide.

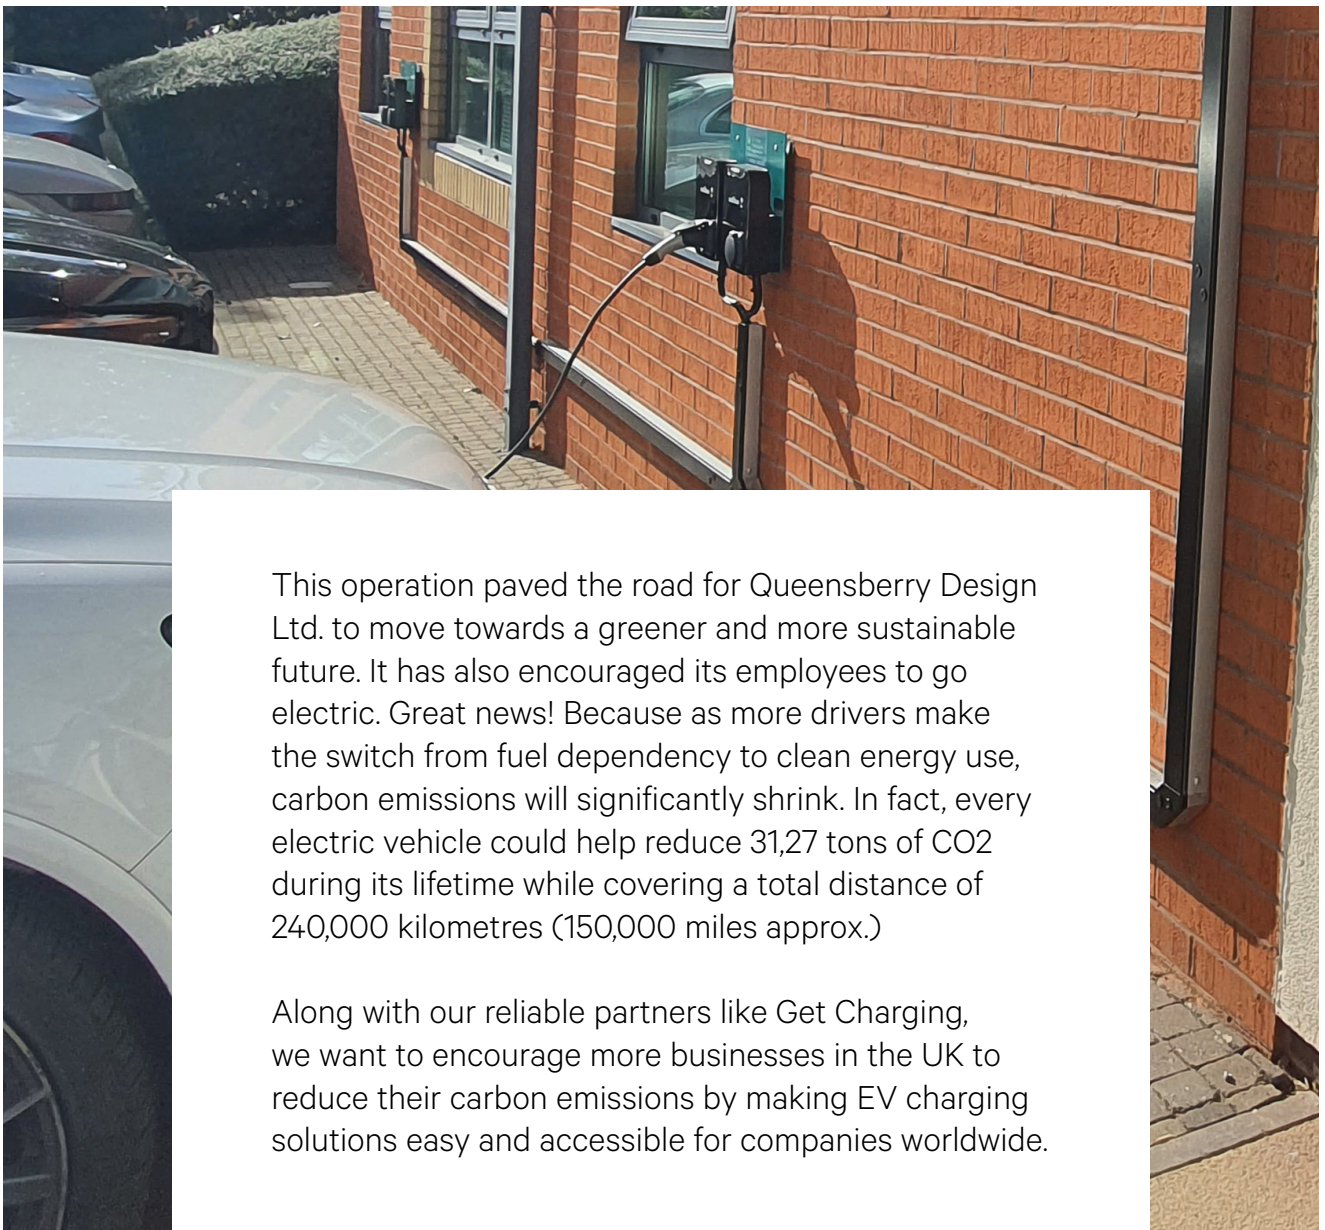

# The results

We did it! Thanks to Get Charging high quality customer service, we installed Copper SB, a reliable and easy-to-use electric vehicle charging solution in Queensberry Design's commercial parking, respecting the active office environment and meeting the proposed schedule.

Additionally, thanks to Get Charging's detail-intensive assessment, we improved efficiency and maximised savings. In total, Get Charging could install five instead of the three initially proposed charging points, increasing operations costs by a mere 13%.

Copper SB, was the ideal socketed charging solution for Queensberry Design. It combines elegant design and versatility to deliver the best EV charging experience. In addition, it works cohesively with the myWallbox platform to offer various functions to control charger status and energy consumption.

This operation paved the road for Queensberry Design Ltd. to move towards a greener and more sustainable future. It has also encouraged its employees to go electric. Great news! Because as more drivers make the switch from fuel dependency to clean energy use, carbon emissions will significantly shrink. In fact, every electric vehicle could help reduce 31,27 tons of CO<sub>2</sub> during its lifetime while covering a total distance of 240,000 kilometres (150,000 miles approx.)

Along with our reliable partners like Get Charging, we want to encourage more businesses in the UK to reduce their carbon emissions by making EV charging solutions easy and accessible for companies worldwide.
