OVENTROP MODULAR HWS GENERATION FITS THE BILL

Romech chose to install Oventrop “Regumaq” Cascade hot water generation equipment at the Holiday Inn Express at Edinburgh Airport, as being wall hung it minimized the space requirement whilst removing the storage of large amounts of potable water and reducing the inherent legionella risks.

The installation consisted of 4 Oventrop wall hung “Regumaq” units, fresh water cascade control set “Regumaq K” and 2 electrically heated buffer tanks “Hydrocor” providing the heating water energy store and “Aquastrom VT” thermal balancing valves on the HWS circulation.
