

**JP Art Gallery**  
**18 Battersea Rise**  
**London**  
**SW11 1EE**

## About the project.

JP Art gallery were looking for a unique but effective way to light up the latest additions to the gallery.. The ispot<sup>®</sup> was chosen because of its unique, ultra thin stylish design and impressive light output. The ispot<sup>®</sup> incorporates innovative high voltage LED chips. These high voltage LED chips mean the ispot<sup>®</sup> doesn't require a driver therefore reducing the level of heat generated whilst increasing efficiency and reliability.

JP Art Gallery acquired 12 of the 20W ispot<sup>®</sup> in daylight colour temperature (5700K). With an impressive lumen output of 1500lm and a beam angle of 110° the ispot<sup>®</sup> 20W was more than enough to light the room and highlight the beautiful art on display.

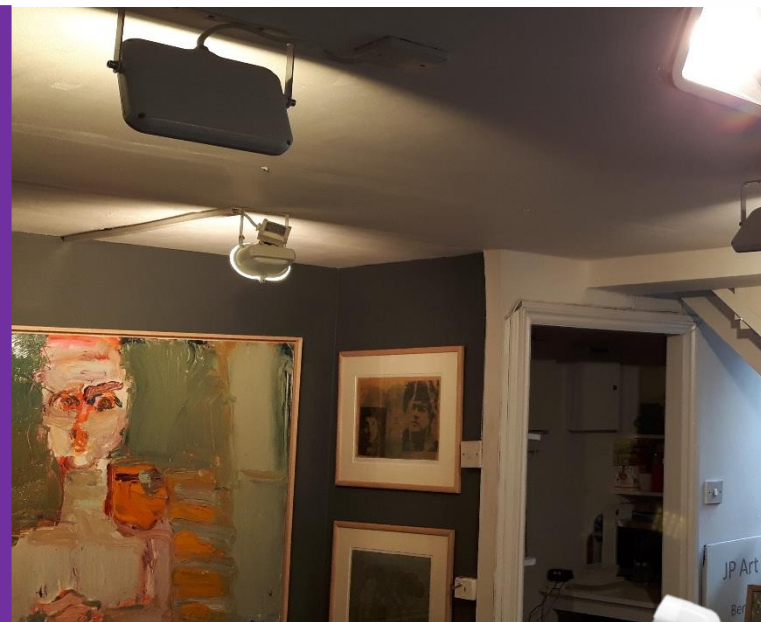

## Why they chose us.

The gallery loved the unique design that reflected the modern feel of the art they were exhibiting and felt the ispot<sup>®</sup> driverless floodlights really accentuated the art they had on display and was in keeping with the ambience they were trying to create within the gallery.

## About the gallery.

JP Art Gallery curate a regularly rotating exhibition which showcases a growing collection of some of the most talented emerging contemporary Artists both from the UK and internationally.

Their aim is to create an accessible and welcoming space to both view and buy fine art. They can offer professional advice due to having 20 years' experience working in art and design. Services include: art consultancy, framing, delivery and hanging.
