

Earth Rod Installation

22nd July 2020

Project Title: Earth Rod Installation - Sparky Life (Giffords Elec)
Location: Former Quarry Site
Product used: Earth Rod Pro

The village was renowned for having rock hard ground, its actually named after the fact that it's just a stony field. It's notorious for solid stone at 1-2 ft depths.

Craig the installer, states **"It's a bit stony already but it is going in"** and if that he was doing it by hand like in his last video, it would take forever but with the Earth Rod Pro, he gets down in minutes. **"So far, so good... we're through most of the rock."**

The Earth Rod Pro allows the installer to bore through underground substrates. The SDS Max Driver and carbide tipped Bit are recommended for tougher ground, while the standard bit will make light work out of softer substrate installations.

"The driver is really good, I like the fact that it just screws on, you put your drill on and away you go."
