

“As a studio, we understand the importance of interior design in a space. It was imperative that our new heating system had style and a flawless finish, alongside 24/7 control from anywhere in the world. That’s why we selected the D electric radiator to join us at VXLAB.”

Brand new installation

VXLAB design studio

in Castellón, Spain

Sleek design and the latest smart controls.

VXLAB is a design consultancy specialising in managing interior design brands. When they renovated their offices in Castellón, they wanted a heating system with the latest smart technology to fit with their new office vibe.

As they deal with interior designers on a daily basis, they needed to ensure that their new heating system would strike a chord with their clients. Therefore, they selected Rointe to represent them.

THE SOLUTION

Made from high purity aluminium with a modern design, the D Series radiators also offered complete control over each radiator and was chosen for this project on that basis. The patented e-life technology and built-in Wi-Fi meant they had heating automation without gateways and did not need to do any additional configurations to their routers.

THE RESULT

The owners can control the temperature, lock the radiators and manage their consumption and costs directly from their smartphones. This met perfectly with their needs.

AUTOMATION WITHOUT GATEWAYS

The D Series heating system is unique in that it includes patented automation technology without gateways. We call it e-life. It allows high data transmission speeds with no need to configure the router and works independently with real-time synchronisation.

PROJECT FEATURES

Project owner	VXLAB design studio
Location	Castellón, Spain
Heating system installed	D Series
Number of products installed	8
Year	2017
