Valley Wholesale Carpets

Valley Wholesale Carpets

25th April 2016

Turpin Lane
Erith
Kent
DA8 2AT

About the project.

Valley wholesale carpets were looking for an efficient but cost effective way to light the warehouse at their head office quarters in Kent. The lighting needed to be super bright daylight colour temperature and exhume a significant lumen output in order to cover every inch of the warehouse.

Valley wholesale carpets in total will acquire 84 x 120W IP40 LED30 lamps to complete their project. The lamps have a 360° light output with an integral driver and IP40 rated LEDs making them the obvious choice for the job. The lamps are instant start and restart ensuring there is no delay in lighting the room. The 120W lamp has a substantial light output of 13800lm with a voltage range of 100-300V.

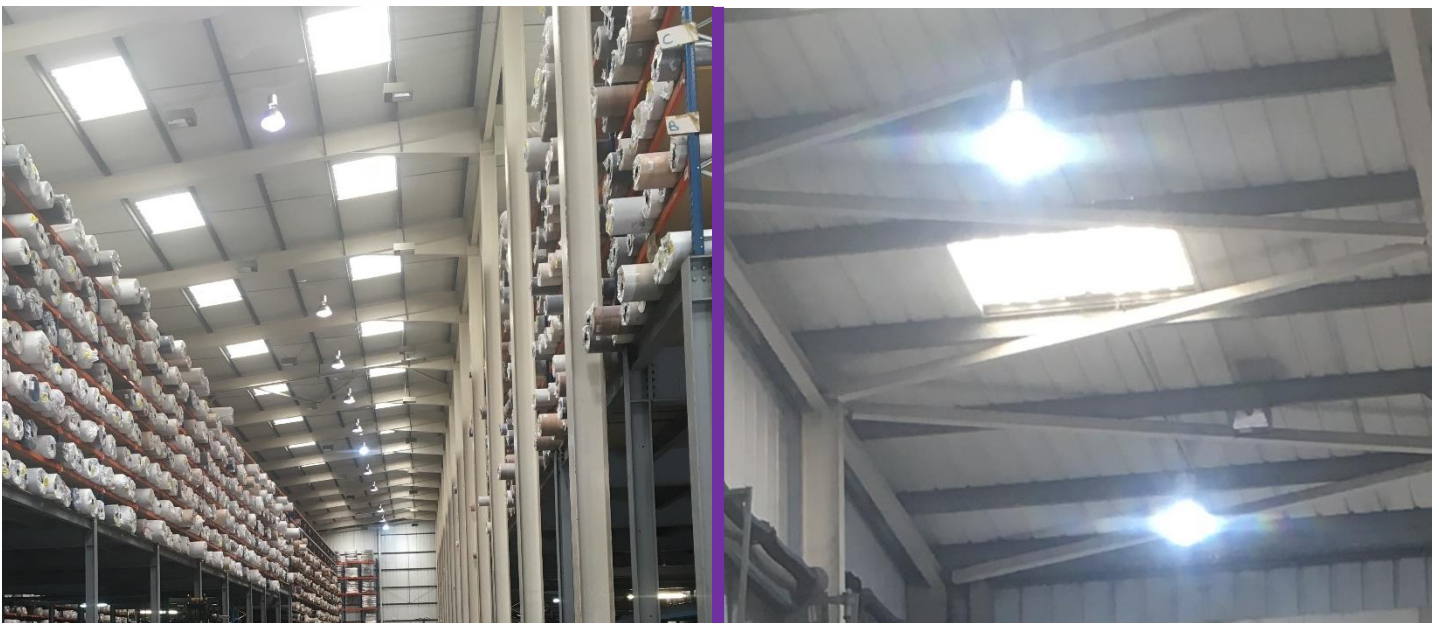

LED360 – HID Retrofit Lamps

The Brackenheath LED360 is a unique water and dustproof range of lamps designed to replace metal halide and low pressure sodium lamps.

The LED360 offers energy savings of up to 80%, whilst increasing the rated life to 50,000 hours.

The heat sink in the LED360 adopts a unique radiator design manufactured from high grade aluminium, allowing the heat to dissipate effectively without the need for a cooling fan.

This design allows the lamp to be used in both open and enclosed fittings.
