

“As we offer stylish, clean and secure accommodation for the modern traveller, we wanted to update our heating to match our target customer. We needed a radiator that would visually stand out from the crowd to match our funky décor and that offered a safe temperature.”

Panel heaters substitution

Youth hostel

in Soho, London

Fashionable heating for the contemporary traveller.

This bright and modern hostel, based in Central London, wanted to replace their dangerous panel heaters for the health and safety of their guests, and to match with the interior décor of the property.

The electrical installer recommended the Rointe D Series system for its low surface temperature, design and longest guarantee on the market.

THE SOLUTION

Based on the requirements, the D Series radiator in graphite was installed for a modern, bold finish to match the rooms. Due to the balance between the heating components, the surface temperature of these radiators does not exceed 43°C, meaning the safety of the guests was ensured.

THE RESULT

The hostel owners were impressed with the 20-year guarantee offered on the D Series radiator, along with the finished installation in graphite. They also now had peace of mind that the surface temperature of these radiators would not harm their guests and were delighted with the added benefit of remote temperature locking from reception using their smartphone and PC.

LOW SURFACE TEMPERATURE

The D Series radiator is an ecological heating solution that not only respects the environment; it ensures the safety of its users. With a low surface temperature of 43°C, it eliminates the risk of burns - something this project owner required.

PROJECT FEATURES

Project owner	Youth hostel
Location	Soho, London
Heating system installed	D Series (graphite)
Number of products installed	60
Year	2017
