

Tanfield Solar LED Ground Light

Item ref: 42035

User Manual

Power button

- Suitable for OUTDOOR USE ONLY - IP65 rated
- Easy to install, no wiring necessary
- Recharges batteries using solar energy
- Automatically charges in sunlight

Installation

- When using for the first time, the solar light needs to charge in full sunlight for 10 to 12 hours. Allow the light to run at least 10 days, charging/discharging to reach the maximum battery capacity. The battery needs to be fully charged/discharged once per month. For best performance and battery life, do not store for prolonged periods.
- Ensure the light is positioned in a bright sunny location where it will receive maximum sunlight. Ideally, in a position where it is free from cover and not in a shaded area. Lack of sunlight will affect charge times and operation.
- Avoid other light sources such as street lamps that may cause the solar lights to flicker on and off.
- Assembling the lamp:

1. Peel off the protective film on the solar panel.
2. Turn the lamp on using the power button.
3. Fix the ground light to the mounting surface. (examples shown right) note: can also be wall mounted

Warnings

- Suitable for OUTDOOR USE ONLY
- DO NOT expose this product to direct heat, flames or immerse in water.
- Keep out of reach of children and pets.
- The LED's are non-replaceable
- Please retain this information for future reference.

Cleaning

- If the solar panel gets dirty the charging capacity will be reduced. Clean panels occasionally with a soft damp cloth.

Troubleshooting

Night runtime is short

The battery is not fully charged. Install the solar light in an area where it can receive the maximum amount of direct sunlight.

Light does not turn on at night

The location is too close to other light sources. Relocate the light away from other light sources.
