

Creswell Solar LED Wall Light with Diffuser

Item ref: 42043

User Manual

- Suitable for OUTDOOR USE ONLY - IP44 rated
- Easy to install, no wiring necessary
- Recharges batteries using solar energy
- Automatically charges in sunlight

Installation

- When using for the first time, the solar light needs to charge in full sunlight for 3-5 days before turning the light on.
- Ensure the light is positioned in a bright sunny location where it will receive maximum sunlight. Ideally, in a position where it is free from cover and not in a shaded area. Lack of sunlight will affect charge times and operation.
- Avoid other light sources such as street lamps that may cause the solar lights to flicker on and off.

Assembling the lamp:

1. Remove the nutheads from the front of the wall bracket.
2. Remove the plastic insert from the rear of the wall bracket.
3. Screw this onto the wall with the screws and rawl plugs provided ensuring the bolts for reattaching the metal bracket are in position and horizontal so the light will be level.
4. Once the plastic insert is attached to the wall put the wall bracket in place and tighten the nut heads to hold the light in position.

Using your Solar Wall Light:

With the switch in the S position the light will operate in standard mode. Moving the switch to the P position will substantially increase the runtime of the light whilst slightly reducing the brightness of the light.

With the switch set to P the light will operate as efficiently as possible however if the panel receives no or little light throughout the day the runtime of the light at night will be reduced, as is the case with all solar products.

If the light fails to operate at night, move the switch to the off position and leave the top to charge for 3 days before trying to operate it again.

Warnings

- Suitable for OUTDOOR USE ONLY
- DO NOT expose this product to direct heat, flames or immerse in water.
- Keep out of reach of children and pets.
- The LED's are non-replaceable
- Please retain this information for future reference.

Battery instructions

- Batteries should be replaced by an adult.
- Different types of batteries or new and used batteries are not to be mixed.
- ONLY use batteries of the same or equivalent type as recommended are to be used.
- Batteries are to be inserted with the correct polarity.
- Exhausted batteries are to be removed from the item.
- The supply terminals are NOT to be short-circuited.
- DO NOT dispose of in fire.
- Battery MUST be recycled or disposed of properly.
- 2pc 1.2V AA 900 mAh Ni-MH rechargeable battery.

Cleaning

- If the solar panel gets dirty the charging capacity will be reduced. Clean panels occasionally with a soft damp cloth.

Troubleshooting

Night runtime is short

Solution 1: The battery is not fully charged. Install the solar light in an area where it can receive the maximum amount of direct sunlight.

Solution 2: The battery has worn out. Replace the old battery. (2 x 1.2V AA 900 mAh Ni-MH rechargeable battery.)

Light does not turn on at night

Solution 1: The location is too close to other light sources. Relocate the light away from other light sources.

Solution 2: The battery has worn out. Replace the old battery. (2 x 1.2V AA 900 mAh Ni-MH rechargeable battery.)
