Kraftform Screwdrivers Series 100 VDE

We want our users to be able to work safely and conveniently. So we have now transferred the advantages of the Kraftform Plus technology into the VDE segment.

The individual testing at 10,000 volts, in accordance with IEC 60900, ensures safe working with loads up to 1,000 volts.

Impact strength tested at -40°C, guaranteeing safety even under extreme conditions.

A precisely-focused laser creates a sharp-edged surface structure. This laser treatment results in an edge hardness of up to 1000 HV 0.3. Wera Lasertip "bites" itself into the screw head and prevents any slips out of the recess. It is available for screwdrivers for slotted, Phillips and Pozidriv screws.

The outstanding design of the Kraftform handle ensures that it fits perfectly into the hand, preventing hand injuries such as blisters and calluses.

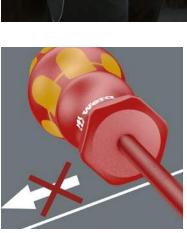

"Take it easy" tool finder: colour coding according to profile and size stamp. This enables faster and more reliable selection of the correct tool from the tool case.

The hard materials used for the handle ensure rapid hand repositioning, without any danger of the skin "sticking" to the handle. The softer "anti-slip" zones enable the low-loss transfer of high forces – resulting in less screwdriving effort being required.

The hexagonal non-roll feature prevents any annoying rolling away at the workplace.
