INDUSTRIAL VINTAGE

With stunning visible filaments, these decorative lamps are especially suited to industrial light fittings, but look equally magnificent by themselves. For both classic and contemporary designs, these unforgettable lights provide instant character.

PENDANT FITTINGS

These fittings grab attention, lending any room a luxury feel whilst still benefitting from maximum illumination. Create that touch of industrial chic while adding warmth and atmosphere to your home, restaurant or bar.

They can be installed onto any ceiling and the cable length can be adjusted to your preference. Great for low hanging pendant drops in single or multiple combinations. Each holds one ES/E27 screw fit lamp.

ECO-FRIENDLY, COST-EFFECTIVE LED TECHNOLOGY

CLASSIC GLS LAMPS

These diminutive round lamps offer nothing but the best when it comes to performance. The Classic GLS Filament lamp is suitable for decorative use in pendant, wall, floor and table light fittings. Ranging from a low 200 Lumens to a dimmable 900 Lumens option, they emit a soothing, warm, white glow and work for an astonishing 25,000 hours.

CANDLE LAMPS

Evoked the soft glow of candlelight with these elegant, candle-shaped LED lamps. Producing a warm white glow, this future-proof LED technology guarantees up to 25,000 hours lifespan; that's equivalent to three years' continuous light. These delicate lamps are suitable for decorative use in pendant, wall, floor and table light fittings.

IDEAL FOR SMALLER LAMPS AND LIGHT FITTINGS

Our Golf Ball lamps are ideal for many domestic, commercial and retail applications. This LED technology produces instant light and is suitable as a direct replacement for old incandescent lamps.

Why Choose a Fire Rated Downlight?

Fire Rated Downlights provide assurance that, in the event of a fire, the hole cut to install a downlight will not become a weak point which allows fire to spread.

In any building, residential or commercial, a ceiling above an inhabited area must be fire-rated. By choosing a fire rated product, the integrity of the ceiling is restored once the downlight can be securely in place.

All TIME LED fire rated downlights are fitted with an approved intumescent pad; this material will swell up when it reaches a certain temperature, to block the potential spread of fire to other areas of the building.

The Electrical Safety Council (ESC) recommends that fire rated downlights should be used in all ceilings, regardless of which type of building they are being installed in.

A Note on Surface Mounted Downlights:

Only recessed downlights carry a requirement to restore fire protection. When installing surface mounted downlights, you may not need to select fire rated products. Always check the regulations as they relate to the specifics of building type and ceiling structure.

PREMIUM MULTI BEAM ANGLE HIGHBAYS

With our Premium Multi Beam Angle Highbays, you can change the beam angle between 70, 85 and 105 degrees simply by rotation. This gives the customer greater flexibility, to achieve a custom lighting effect tailored to each specific location. It also offers the wholesaler a greater efficiency; allowing you to stock one product that fits 3 different buyer specifications.

Auto Self-Test Feature

FOR GUARDIAN RANGE PRODUCTS 793503 AND 793510

What is Self-Test?

The Self-Test feature is built into selected TIME LED emergency solutions. This technology executes functional and durational testing according to the relevant standards for each solution. Self-Test removes the need for frequent manual testing and physical interaction with the product after installation, except in the case of an actual fault.

What are the Benefits?

Self-Test emergency lighting offers safety compliance, labour cost-savings, convenience and ease of fault identification. Moreover, there is no requirement to isolate the mains supply when the Self-Test function is operating, which reduces disruption for those using the space.

How does it work?

After the product has been installed and on charge for around 30 days, it will go into monthly Self-Test mode. This will last for 30 seconds, and will repeat every month following. An annual Self-Test will also occur approximately every 360 days; this will last for 3 hours. Following each Self-Test sequence, the product will return to charging mode.

When entering any Self-Test mode, the indicator on the product will change to solid orange and the lamp will illuminate. Once complete, it will return to a green light. If in any instance the light turns RED, this indicates the test has failed and the product needs further inspection.

GUARDIAN 5W EMERGENCY BULKHEAD

Ideal for both commercial and industrial usage, Warehouses and supermarkets, exhibition halls, and more.

PIR SECURITY LIGHTS

EXTERIOR LIGHTING

Enhance safety and security in your outdoor spaces with these energy-efficient outdoor security lights. Ideal for entrances, side passages, sheds and outbuildings, the built-in PIR sensor is sensitive to movement, emitting a bright pool of light that functions either as a deterrent or to light the way as you return home.

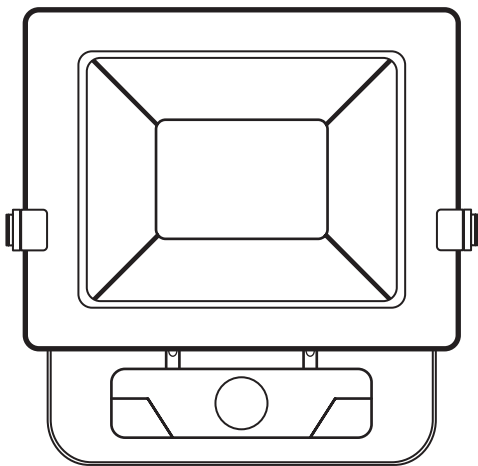

Our range of flood lights and PIR security lights are available in wattages from 10W right up to 50W. These lights are developed to last, and will deliver high-quality light efficiency and output. All security lights come with an IP65 rating, ensuring they are waterproof and resistant to numerous weather environments.

GARDEN SOLAR LIGHTS

Our collection of solar-powered lights with PIR sensors work reliably all year round. The built-in solar panel charges the battery during the day, while the PIR sensor activates the light as needed between dusk and dawn.

Know Your IP Rating

IP stands for Ingress Protection and is formed using two numbers: IPXX. The two numbers refer to two separate levels of protection.

IPXX

The first digit shows the level of protection against solid objects.

1

>50mm
Protects from solid objects bigger than 50mm in diameter. (hands/large tools)

2

>12.5mm
Protects from solid objects no bigger than 12.5mm in diameter. (fingers/similar objects)

3

>2.5mm
Protects from solid objects bigger than 2.5mm in diameter. (small tools/thick wires)

4

>1.0mm
Protects from solid objects bigger than 1.0mm in diameter. (wires/large insects, etc)

5

Dust Protected
Sufficient protection against dust that could damage equipment.

6

Dust Tight
No ingress of dust. Complete protection against dust.

The second digit shows the level of protection against liquids.

1

Water Droplets
Protects from vertical water drops when mounted in upright position.

2

Water Droplets (angled)
Protects from vertical water drops when at a 15° angle.

3

Spraying Water
Protects from water spraying up to an angle of 60° on each side.

4

Water Splashes
Protects from water splashes/spray at any angle.

5

Water Jets
Protects from water jets with a low/medium pressure from any direction. (hose pipes, etc)

6

Powerful Water Jets
Protects from water jets with a high pressure from any direction.

7*

Submerged up to 1m
Protects from submersion in water up to 1m under defined conditions of time and pressure.

8*

Submerged over 1m
Protects from submersion in water over 1m under defined conditions of time and pressure.

*Please Note: IPX7 and IPX8 are tested under different methods to that of IPX6 and below. Products with IPX7 or IPX8 are not always necessarily protected from water jets or splashes.

USEFUL INFORMATION

LUMEN COMPARISON CHART

LED WATTS	EQUIVALENT LUMENS (lm)
1W	90lm
6W	375lm
10W	450lm
15W	800lm
19W	1100lm
25W	1600lm
38W	2600lm
50W	3000lm

COLOUR TEMPERATURE

2700K - Very warm white light - Provides a relaxed and intimate atmosphere (home environments)
 3000K - Warm white light - Not too hot and intense. Pleasant to the eyes (office environments)
 4000K - Cool white light - Sharp white light. Ideal for work environments (warehouses etc)
 6500K - Daylight - Similar to natural daylight, applicable in areas where everything must be visible (company halls, factories)

Colour Rendering Index: Light sources with a CRI of 90 or higher are excellent at colour rendering, and should be used for tasks requiring the most accurate colour discrimination. As a general rule, **any source with a CRI rating of 90 or above will faithfully render colours.**

IP RATINGS

An IP Rating is a rating given to indicate the level of protection that the product holds. The two numbers represent the IP rating; the first digit indicates the level of protection from solid objects or materials whilst the second digit shows the protection from liquids (water).

IP20 - Protected against solid objects up to 12mm

IP44 - Protected against solid objects over 1mm and protected against water splashed from all directions

IP54 - Protected against dust ingress sufficient to prevent the product from operating normally but it's not dust-tight. The product is fully protected against solid objects and splashing of water from any angle

IP65 - Fully dust-tight and protected against solid objects. It is also protected against water jets projected by a nozzle (6.3mm) from any angle
