

Warner Howard Low Energy Range

airforce is manufactured by World Dryer, and since its introduction in 2007 has taken the market by storm. It features patent-applied technology which uses a high speed motor to force air flow through 11 nozzles - meaning a really fast dry time but using a very low power output of just 1.1kW - the lowest energy consumption in its class. Our ongoing product development has resulted in an improved Airforce MkIII - its noise reduction technology means it is just 79dB, and it also comes with a replaceable air intake filter as standard. Best of all, the Airforce requires no ongoing maintenance or complicated cleaning routines - it really is a complete solution.

Warner Howard Low Energy Range

it's green

it's clean

it's fast

it's simple

End users have been thrilled at the savings they have made on their running costs by installing the Airforce dryers, and contractors love the fact that the purchase price is around half that of other well known low energy dryers. The Airforce is a perfect solution to the problem of ever-increasing running costs - and is environmentally friendly as well.
