

Feature

- Unwired trailing socket available in 1, 2, 4 and 6 gang
- 13A Rating
- Neon indicates when power is active (4 and 6 gang only)

Description	Product Code
1 Socket Unwired Extension Lead	9128
2 Sockets Unwired Extension Lead	9148
4 Sockets Unwired Extension Lead	9118
6 Sockets Unwired Extension Lead	95668

The SMJ RCD, or residual current device, provides protection against a potentially fatal electric shock.

These devices constantly monitor the electrical circuit they are protecting and will detect any unintentional path of electricity flow, switching the power off quickly thus avoiding the risk of electric shock or injury.

All RCD's are non-latching, which requires the product power to be reset after each time a fault is detected and the device is tripped.

Feature

- Cuts power in 30m/s when an imbalance is detected to prevent electrocution
- Approved to the latest European standards
- Double pole protected
- Essential for use in high risk areas such as construction sites
