

MW and EW Stored Water Heaters

Small capacity stored water heaters

The MW and EW range of unvented stored water heaters quickly and effectively provides hot water on demand for up to 4 outlets simultaneously, from a mains pressurised water supply and with a B rating for energy efficiency.

Key features

- Compact design for wall or floor mounting under handwash basins and kitchen sinks, with remote siting option
- Superior insulation combined with short pipe runs minimises heat loss, saving energy
- Provides a balanced hot and cold water supply, via existing taps or mixers for convenience
- Adjustable thermostat up to 70°C, with safety cut-out protection
- Heating element on/off neon indication
- Supplied with fitted magnesium sacrificial anode, wall bracket and fixings
- MW heaters have a factory fitted temperature and pressure relief device for safe and easy installation
- EW heaters are supplied, with an accompanying 6bar expansion relief valve (relevant safety protection devices may be required to complete the installation)

Technical information

Performance: 3kW

Water: operating water pressure 1–12bar (above 6bar a cold water pack is required) Inlet/outlet connections 15mm (1/2" BSP)

Power: connection points: water inlet and outlet top, cable entry point bottom right hand side
