# Fluid conditioning – the pressure is rising for planners and plant manufacturers!

The development of technical solutions for heating and cooling systems is progressing faster and faster, thus mounting the pressure on planners and plant manufacturers.

The results of these developments are consistently positive for investors, operators and owners, and lead to heating and cooling systems and their components becoming more and more efficient, effective and powerful. This conserves valuable resources, increases efficiency, saves a lot of energy and ultimately reduces the operating and energy procurement costs. However, this also means that the tasks for you as a planner, plant manufacturer or engineer are becoming increasingly complex at the same time.

As with a racing car, all components have to be optimally selected so that the full potential of the entire system is realised, and you can reap the rewards of your investment.

It is therefore clear that detailed and systematic planning and consideration of all components – including the heating or cooling water – as well as all influencing factors, whether from a mechanical, physical or chemical point of view, are now more important than ever before.

# Each system is only as good as its weakest component

Heat boilers, heat pumps, cooling units, high efficiency pumps, hydraulic valves and heat exchangers are now highly optimised in terms of efficiency, and already seem to be at the pinnacle of their performance.

In the case of modern pumps, for example, this is achieved by means of smaller clearances, whereas, for a better hydraulic alignment, control valves are now used which only have minimal openings.

It is easy to imagine that the quality and composition of heating or cooling water as a medium of heat transfer can influence the efficient and, above all, trouble-free operation of heating and cooling systems in a way that is often underestimated.

Today, each and every component of the system has an important function, and the weakest link in the chain defines the overall quality. This is a valid reason for paying close attention to the often underestimated and unloved system fluid and its optimal conditioning. This is good news for operators, owners, controllers and service staff!

The system fluid – the lifeblood of every heating and cooling system

If we were to attempt to make an anatomical comparison, we could consider heating and cooling generators, the pumps and valves in heating and cooling systems, as the central and vital body organs, such as the heart and lungs, and the system fluid as the blood.

As the condition of blood in the human body is of key importance for all organs to work efficiently and to survive the elements of everyday life, so is the fluid in a HVAC system. When the blood is in good condition, the organs can work and the whole organism is capable of surviving. The same is true when it comes to HVAC systems. The moment the quality of the system water fails to meet the standards and guidelines, significant errors, serious damage and loss of efficiency may occur. This may lead to legal or regulatory implications and can have a negative effect on warranty, operational costs as well as repair and maintenance costs.

Corrosion is just one of many consequences  
of inadequate water conditioning

There are numerous factors that pose negative effects on inadequately conditioned system fluid.

Chemical processes, deposits, particles or air in the system fluid, can all influence the functionality of individual components and also the effectiveness of the entire system. They can lead to serious damage in individual vital parts, to an incorrect pH value, which provokes corrosion on metallic materials, up to microbiological film formation and the resulting clogging of small cross-sections in the heating or cooling system.

The system really does not reveal its full power until everything is coordinated. When there is constant pressure in the system, when there is a consistent absence of air pockets, when particles such as magnetite are automatically removed from the system, when the pH value is correct, you will get consistent high performance and economic value from your installation.

# System breakdown due to a heating obstruction

Even with the best system water, unpleasant effects such as corrosion and the resulting corrosion particles in the system water of heating, cooling and processing systems cannot be completely prevented.

The risk of contamination of plant water is commonly underestimated or overseen completely by planners and operators because the corrosive particles such as magnetite and other dirt generated in the system are often so small that they cannot be seen with the naked eye. Initially, even systems designed without a dirt separator such as the SpiroTrap, work smoothly. However, in the medium to long term, the continuous deposition of particles and dirt on system-sensitive components such as heat exchangers, pumps, valves and throttle valves causes serious problems. In addition to significantly increased energy consumption, this leads to the impairment of important functions and to recurring faults, combined with the need for additional maintenance and economic consequences for the operator. In the end, it can even lead to a heating obstruction – that is, the failure of the entire system.

## SPIROTECH SOLUTIONS FOR DIRT SEPARATION

Spirotech offers a comprehensive range of SpiroTrap dirt separators – from small brass models for all residential dwellings, to extremely robust and powerful steel models for large-scale industrial use. With the SpiroTrap MB3/MBL and SpiroTrap Magnet series, Spirotech also has extremely powerful dirt separators with unique magnetic technology. They guarantee fast and optimal magnetite and dirt separation.

Beside non-magnetic particles, even the smallest magnetite particles are removed, maximising system performance and protecting costly system components. Thanks to the smart design, collected dirt can be removed quickly and easily during operation. In addition, with the SpiroCombi, Spirotech offers a hybrid variant which simultaneously separates air and dirt.

SPIROTRAP® MB3

SPIROTRAP® MAGNET

# From circulation problems to a blockage

There are many possibilities for air to enter the system water in heating, cooling and processing systems. In part, depending on the pressure and temperature in the system, air is already present in water.

Air in the system is frequently responsible for costly and high-maintenance failures. It causes loud noises in radiators, heat exchangers, pipes and pumps. It makes it extremely difficult to adjust systems, and promotes corrosion and thus the formation of dirt and magnetite. Air in the system leads to a significant reduction in heating and cooling performance, and premature wear and tear on major system components, or, much worse: a blockage. This, in turn, could lead to the complete failure of the system, with all the hassle that comes with it, such as dissatisfied tenants, operators or investors. It is therefore predictable what will happen in the medium to long term if a system is designed and operated without individual solutions for air removal, such as the SpiroTop automatic air vent, the SpiroVent microbubble deaerator and the SpiroVent Superior vacuum degasser.

#### SPIROTECH SOLUTIONS FOR AIR REMOVAL

Spirotech offers a comprehensive portfolio of consulting, solutions and services for three different types of air inclusion in heating, cooling and processing systems. The SpiroTop automatic air vent series is ideal for removing free air from the system. For separating and removing micro-bubbles from process fluid, Spirotech offers its customers the SpiroVent series. And for releasing, separating and removing free air, trapped air and even dissolved air, from the process fluid, there is the SpiroVent Superior vacuum degasser.

SPIROTOP®

SPIROVENT®

SPIROVENT® SUPERIOR

# Heating rhythm disturbances and pressure fluctuations

It is undisputed that many of the problems with heating and ventilation systems are caused by poor pressure retention. This can lead to a number of serious consequences.

Whether a heating, cooling or processing system is being built from scratch or it is being refurbished, the right design, installation and maintenance are decisive for an efficient and economical operation. Poorly designed or serviced pressure maintenance inevitably leads to higher operating costs: It must be constantly fed in, which leads to air problems and a higher rate of system wear (cavitation on pumps).

Maximum performance is achieved exclusively via tailor-made solutions that integrate both vacuum degassing and pressure maintenance, such as the SpiroPress series. This is the only way to avoid heating rhythm disturbances and pressure fluctuations.

## SPIROTECH SOLUTIONS, COMBINING PRESSURE MAINTENANCE AND VACUUM DEGASSING

The SpiroPress series covers a full range of solutions, for the most basic setup to the most extended, complicated system. SpiroPress is tailored to all requirements and dimensions from XS to XXL in different product lines. The additional water required in the system is degassed in the SpiroPress series prior to system entry, offering the system substantial long-term protection – not only during adjustment but during the entire operating period of the system. SpiroPress can dramatically increase system performance. The premature failure of important system components can thus be avoided. Extended with dirt separation and degassing, the system functions just as operators and users wish.

# SpiroLife – exceptional guarantee up to 20 years

SpiroLife offers exceptional guarantees for our air and dirt separation products. A 20-year guarantee, unique in the industry, is offered on all standard brass products\*.

Our high-quality solutions for deaeration, dirt separation, pressurisation and system water analysis are based on smart concepts, which have proven themselves repeatedly over decades. Of course, such exceptional and reliable products come with exceptional guarantee terms. Our aim is to provide the best possible quality for our clients and end-users, which makes us confident we can safely offer extended warranties.

Our robust products and services bring you energy savings, increased reliability and enhanced comfort. You can also be assured of maximum uptime, reduced maintenance costs and a longer service life for all your heating, cooling and process installations.

## SPIROLIFE GUARANTEES

- **SPIROLIFE-GUARANTEE 20-YEAR GUARANTEE**

On standard Spirotech brass products with operational temperatures up to 110 °C (\*except marked otherwise)

- **SPIROLIFE-GUARANTEE 5-YEAR GUARANTEE**

On steel products and on brass products with operational temperatures in excess of 110 °C.

- **SPIROLIFE-GUARANTEE 2-YEAR GUARANTEE**

On SpiroVent Superior vacuum degassers and on SpiroPress.

Please note that guarantees are subject to correct selection, installation, maintenance and use of the products, in accordance with our regulations, data sheets and user manuals and do not cover normal wear and tear.

## STATIC HEIGHT DESIGN CRITERIA FOR SPIROTECH INLINE UNITS

In case of an excessive static head (pressure) above a deaerator, dissolved air cannot be released from the fluid. Under these circumstances it is very hard to predict where in the system air bubbles will emerge from the fluid. Apart from that, the point where microbubbles emerge can change depending on fluid temperature and hydrostatic

pressure (Henry's Law). Rule of thumb for maximal static height: heating  $\leq 15$  m, cooling  $\leq 5$  m. Above the critical height, a vacuum degasser is generally a more effective solution. For custom made advice, please contact us.

## HENRY'S LAW APPLIES TO EVERY SYSTEM AND STATES THE FOLLOWING:

Gas will dissolve in a fluid until there is a balance between the partial pressure of the gas in the fluid and the partial pressure of the same gas outside the fluid. It also applies that in a fluid under the influence of pressure and temperature, a certain maximum amount of gas can be dissolved. This also means that as the temperature or pressure changes, gases can be emitted.

Therefore, temperature and pressure influence the property which allows water to absorb or emit air. A heating or cooling system is a constant string of pressure and temperature variations.

## CATEGORISATION OF PRODUCTS

Introduced in 2016 to support a faster and easier navigation of our product catalogue.

Read below about the new categories and their specification.

### STANDARD SOLUTIONS

- Max. operating pressure up to 10 bar
- Fluid temperature up to 110 °C
- Nominal flow velocity up to 1.5 m/s.

Products which meet the specifications noted above are considered standard solutions.

### SPECIAL SOLUTIONS

Products, which divert from the standard parameters. For example our Hi-flow product range, which is designed for a nominal flow velocity of 3 m/s.

### CUSTOM SOLUTIONS

In addition to the models listed in the product catalogue, Spirotech offers customisation options (see table below). In case you experience any difficulties selecting from our options, or would like to discuss a more complex situation, please contact your local Spirotech office.

**SPIROTOP®**

Industry-leading  
20-year guarantee

No valve contamination  
due to distance from water

Special leak-free  
valve construction

Extensive range of models

Sturdy brass and  
stainless steel units

1/2" connection  
prevents bubble blockage

All images used are for illustrative purposes only. Individual features like material used (i.e. brass or steel) may vary, as may guarantee.

## BENEFITS OF SPIROTOP

The combination of the characteristics listed below ensures that the automatic SpiroTop will not leak:

- The special valve construction makes sure that the valve is closed completely
- The special valve seat has a very long life expectancy
- The robust floats are made of solid plastic so they cannot rupture
- The large air gap between the valve and the water (at least 40 mm) prevents valve contamination which is one of the main causes of leaks
- The 1/2" connection prevents the pipette effect

### SPIROTOP AUTOMATIC AIR VENTS

SpiroTop automatic air vents quickly and effectively remove free air and allow for fast, reliable aeration when a system is drained. This prevents component damage and system failure. Available for pressures up to 25 bar and temperatures up to 200 °C.

### PREVENT FUTURE COSTS

Air and other gases trapped at one or more high points in a system can obstruct the flow at these spots or even stop it altogether. If gases are not sufficiently removed, commissioning problems may occur, frequent manual venting will be required and pumps will need to run at a higher rate, using more energy due to a bigger pressure drop. Bubbles travel and by doing so they may interfere with the control valves authority. Eventually, expensive system components will be damaged, leading to system and process malfunctions or even total failure.

### PREVENTING CONTAMINATION AND LEAKAGE

SpiroTop provides a solution for filling and venting systems, making and keeping the high points in pipe systems air-free and preventing air pockets from forming. The significant gap between the valve and the water (at least 40 mm) prevents valve contamination, one of the main causes of leaks. Thanks to a reliable venting mechanism and special construction, the valve closes completely and is protected against

leaking. The special valve seat has a very long life. A SpiroTop is connected to the system by a female 1/2" connection. With smaller connections, bubble blockage may occur and the device stops working adequately.

The most commonly used SpiroTop (AB050) comes with an industry-leading 20-year guarantee. All other models have a 5 year guarantee period.

SpiroTop is the reliable and worry-free solution ideal for:

- filling and draining systems
- making and keeping the highest points in systems air-free

MICROBUBBLE DEAERATORS

**SPIROVENT®**

Industry-leading  
20-year guarantee

Reduction of  
maintenance and malfunction

Energy saving

Quick and easy, universal  
installation (360°)

Sturdy brass  
housing

Reliable, leak-free  
venting system

## BENEFITS OF SPIROVENT

- Removes all circulating air and microbubbles effectively
- Removes trapped air when installed at the correct location
- Greatly reduces the need for manual venting
- Constant low pressure drop
- No unnecessary shutdown
- Connection diameters from  $\frac{3}{4}$ " to DN 800 (see page 30 for additional options)
- A complete range, suitable for various pressures and temperatures
- Exceptional guarantee

Shortly after the first decade of Spirotech's existence a game-changing product family was announced. By introducing the SpiroVent in 1968, Spirotech laid the foundation of understanding microbubble deaeration and optimising performance of HVAC systems. 50 years later, the SpiroVent microbubble deaerator range stands stronger than ever. The once narrow product range, now offers a broad and well customizable portfolio. From  $\frac{3}{4}$ " up to DN 800, from brass to steel, from normal- to high-flow, a wide variety of microbubble deaerators are being manufactured in the Netherlands to satisfy customer needs.

Check the Spirotech website for more on the 50th anniversary of our beloved SpiroVent.

### SPIROVENT MICROBUBBLE DEAERATORS

SpiroVent microbubble deaerators are installed inline and continuously remove free air and microbubbles from the system fluid.

A SpiroVent deaerator should always be installed at the hottest point within a system. In the case of a heating system, for example, this is the point where the water exits the boiler. In the case of a cooling system, it is in the return before the chiller unit. When installed in the correct location a SpiroVent has the capability to deaerate the entire system as it can make the water absorptive to remaining air in the system.

### WHY USE SPIROVENT PRODUCTS?

Today's highly energy-efficient heating and cooling systems offer optimal performance with air-free system water. Automatic air vents and bleeding valves cannot remove microbubbles or circulating air. Venting devices on boilers and other devices will not remove air that is present elsewhere in the system. Furthermore, presence of air is the major cause of dirt formation on corrosion and related negative effects on efficiency, failure sensitivity and wear and tear.

### HOW DOES IT WORK?

The SpiroVent is a fully universal deaerator that works non-stop to effectively remove circulating air and microbubbles from system water. At the heart of the SpiroVent is the Spirotube separation element, which ensures that microbubbles are separated from the water flow, allowing them to rise up to the air chamber. The specially constructed air chamber provides sufficient volume to absorb pressure fluctuations and prevents valve contamination. This is one of the main causes of leaks. Thanks to the special construction and the solid valve seat, the leak-proof air release valve opens, releases the air and always closes perfectly. This avoids unwanted entry of air from outside the system.

### UNIQUE FOR SPIROVENT RV2

The sturdy brass SpiroVent RV2 is equipped with a swivel connection making it very easy to install, also ideal for existing pipework because of the slide-over compression coupling. Thanks to the swivel connection, the SpiroVent RV2 is suitable for horizontal, vertical, and diagonal pipes.

Studies from Kiwa GASTEC, BSRIA, TNO and others show SpiroVent deaerators can save up to 6% on energy consumption.

AUTOMATIC AIR VENTS AND DEAERATORS  
FOR SOLAR INSTALLATIONS

# SPIROTOP® SOLAR

# SPIROVENT® SOLAR

Industry-leading  
5-year guarantee

Continuous deaeration  
in solar installations

Energy saving

Sturdy brass  
housing

Reliable, leak-free  
venting system

SOLAR

All images used are for illustrative purposes only. Individual features like material used (i.e. brass or steel) may vary, as may guarantee.

# SPIROTOP® SOLAR SPIROVENT® SOLAR

## BENEFITS OF SPIROTECH SOLAR SOLUTIONS

- Removes circulating air and microbubbles effectively
- Removes trapped air
- Greatly reduces commissioning times
- Minimal constant pressure drop
- No unnecessary shutdown
- The special valve seat has a very long life expectancy

## SPIROTOP SOLAR/SPIROVENT SOLAR AUTOMATIC AIR VENTS AND DEAERATORS FOR SOLAR INSTALLATIONS

Air in a solar installation causes complaints, excessive wear, low efficiency and process interruptions. All of these are avoidable by using Spirotech Solar solutions. Furthermore, even the "boil dry" situation of the solar installation can be prevented.

## AUTOCLOSE DEARATORS FOR IMPROVED EFFICIENCY

Thanks to a patented invention, Spirotech offers solar deaerators also with an AutoClose function.

As soon as the fluid temperature rises above its boiling point, the deaeration valve closes quickly and completely, preventing the escape of air and steam and thereby the risk of boiling dry of the system.

When the temperature has dropped sufficiently, the valve is reopened for deaeration and the deaeration process is restarted. This means permanent deaeration in the ideal location. Shut-off valves are now redundant.

Thanks to the AutoClose principle, solar installations can remain free of air permanently, increasing system efficiency and preventing all kinds of discomfort and complaints.

### Benefits of AutoClose:

- prevents stagnation
- solar fluid will not prematurely degenerate
- system will not boil dry via the deaerator
- no more climbing the roof to deaerate
- permanent air-free, efficient installation
- suitable for new and existing installations

VACUUM DEGASSERS

# SPIROVENT® SUPERIOR

Industry leading  
2-year guarantee

Quick and easy  
installation

Energy saving

Works perfectly with all  
common expansion systems

Protection against  
excessive refilling

Significantly reduced  
commissioning times

All images used are for illustrative purposes only. Individual features like material used (i.e. brass or steel) may vary, as may guarantee.

SUPERIOR

# SPIROVENT® SUPERIOR

## BENEFITS OF SPIROVENT SUPERIOR

- Removes all gases, free air, microbubbles and dissolved gases
- Absorptive fluid also ensures the removal of trapped gas bubbles
- Easy installation, which greatly reduces commissioning and handover
- Energy-efficient whilst still achieving the lowest possible gas concentration thanks to SmartSwitch
- Degassed (re)filling and sustained pressure
- Warns before (re)filling becomes excessive
- An extensive range for a wide variety of systems
- Can team up with all common expansion systems
- Two-year guarantee

## SPIROVENT SUPERIOR

The SpiroVent Superior is a fully automatic vacuum degasser for heating, cooling and process systems. Because of the fully electronic control system, the Superior offers numerous options for reading system information, status and logged data.

## HOW DOES IT WORK?

A pump takes a quantity of system fluid from the circulating flow. Closing a solenoid valve creates a vacuum so that the dissolved gases emerge from the water. These accumulate at the top of the vessel and are released via the air vent. The degassed and absorptive fluid is then returned into the system and will absorb gases again. There are various reasons why gas will always be able to enter a system. Therefore, vacuum degassing is not a one-time process but a continuous requirement.

As soon as any gases are removed, it is registered by the integrated SmartSwitch. If the SmartSwitch has not registered anything for a set amount of time, the SpiroVent Superior detects that the quantity of all gases, including dissolved gases, has reached the minimum value. The degassing process will then stop automatically and start again at the next pre-set time, so the device is only operated when necessary. As a result, energy consumption is kept to a minimum and the life of costly components is extended significantly.

When should a vacuum degasser be used?

- For systems with many branches and a low flow velocity.
- When the system has a small temperature differential.
- When an inline deaerator cannot be installed.
- When it cannot be predicted where gases are released from the water or when that point has a very low flow rate.

**SPIROVENT® SUPERIOR** – SpiroVent Superior vacuum degasser for heating and cooling systems

PARTICLE AND DIRT SEPARATORS

**SPIROTRAP®**

Industry leading  
up to 20-years guarantee

High-efficient  
dirt separation

Energy saving

Safe, high-powered  
magnet

Constant,  
low pressure drop

Quick and easy  
cleaning

SPIROTRAP®

All images used are for illustrative purposes only. Individual features like material used (i.e. brass or steel) may vary, as may guarantee.

**SPIROTRAP®****BENEFITS OF SPIROTRAP**

- Very small particles, from 5 µm (= 0.005 mm) are separated and removed
- Dirt can be drained while the system is in operation
- No shut-off valves or bypass required
- Constant low pressure drop
- Maintenance only takes a few seconds and is not a dirty job compared to a filter solution
- No unnecessary downtime
- Connection diameters from ¾" to DN 800 (see page 30 for additional options)
- A complete range, suitable for various pressures and temperatures

**SPIROTRAP PARTICLE AND DIRT SEPARATORS**

Today's highly energy-efficient heating and cooling systems can only offer optimal performance with dirt-free water. In untreated systems, dirt can accumulate in multiple places throughout the system. Studies and practical experience show that magnetite in particular, leads to greatly reduced energy efficiency and therefore higher energy costs. Ensuring quick and efficient dirt removal is essential. Spirotech offers an extensive range of SpiroTrap dirt separators from small brass solutions to heavy duty steel units, specifically designed for the removal of dirt.

**AVAILABLE VERSIONS:**

- Normal flow brass (designed for a nominal flow velocity up to 1 m/s)
- Normal flow steel (designed for a nominal flow velocity up to 1.5 m/s)
- Hi-flow (designed for a nominal flow velocity up to 3 m/s)
- Magnetic (separators with internal or external magnet)
- Demountable (If the level of contamination is such that it needs to be possible to replace or clean the separating element).

**MAXIMISING PERFORMANCE – PROTECT COMPONENTS WITH SPIROTRAP MB3/MBL**

The unique magnetic field booster technology guarantees fast and optimal dirt separation. Beside non-magnetic dirt even the smallest magnetite particles are removed, maximising system performance as well as protecting costly system components.

Thanks to the ingenious design, collected dirt can be removed quickly and easily. The sturdy brass SpiroTrap MB3 and SpiroTrap MBL are equipped with a swivel connection that makes them very easy to install and suitable for horizontal, vertical and even diagonal pipes. The units with compression couplings have a unique slide-over installation, allowing for quick and easy installation in existing systems.

For connections from 1¼" up to 2", we offer the SpiroTrap MBL.

For even larger applications, we recommend our SpiroTrap Magnet (in steel).

Kiwa GASTEC has objectively proven that Spirotech's SpiroTrap MB3, which maximises magnetite removal, can bring up to 7.4 % energy savings.

DEAERATORS AND DIRT SEPARATORS

**SPIROCOMBI®**

Industry leading  
up to 20-year guarantee

Energy saving

Highly efficient  
air and dirt removal

Quick, easy cleaning

Unique, high-powered  
magnet

Protects critical  
system components

All images used are for illustrative purposes only. Individual features like material used (i.e. brass or steel) may vary, as may guarantee.

SPIROCOMBI®

## BENEFITS OF SPIROCOMBI

- Removes circulating air and microbubbles effectively
- Very small particles, from 5 µm (= 0.005 mm), are separated and removed
- Dirt can be discharged while the system is in operation
- No shut-off valves or bypass required
- Constant low pressure drop
- Exceptional guarantee

## SPIROCOMBI DEAERATORS AND DIRT SEPARATORS

Today's highly energy-efficient heating and cooling systems offer optimal performance with water that is free of air and dirt. In untreated systems, air may cause problems such as flow interruptions or even a complete system failure. Dirt consists mainly of magnetite, that can accumulate wherever a magnetic field is present. In valves or heat exchangers, pipes, radiators, pumps and calorimeters. Next to costs associated with repairs, parts and downtime, contamination also leads to reduced system performance and, therefore, higher energy costs.

Spirotech offers an extensive range of SpiroCombi deaerators/dirt separators, especially designed for the simultaneous removal of air and dirt. These remove air, microbubbles and dirt particles from system water continuously.

### EFFECTIVE, SAFE, COMPACT AND EASY TO USE

System characteristics determine the best option; two individual separators or a single combined unit. For the fastest removal of magnetite, SpiroCombi Magnet has been added to the existing range of combined air and dirt separators.

The Spirotube separation element ensures effective separation of air and dirt with a minimal pressure drop. The reliable venting mechanism is leak-free and guarantees effective deaeration. The dry pocket magnet increases the magnetite removal substantially and features an excellent first pass efficiency. Collected dirt can be removed quickly, easily and without mess using a drag mechanism. The easy-to-clean magnet resides safely inside the unit and always remains correctly mounted. The robust device's compact design means minimal height is required for installation.

HYDRAULIC DEAERATORS AND DIRT SEPARATORS

**SPIROCROSS®**

Industry-leading  
20-year guarantee

Minimal fluid  
mixing

3-in-1 operation:  
balancing, deaeration,  
dirt separation

Increased energy  
efficiency

3-in-1 savings:  
space, time, costs

All images used are for illustrative purposes only. Individual features like material used (i.e. brass or steel) may vary, as may guarantee.

SPIROCROSS®

**SPIROCROSS®****BENEFITS OF SPIROCROSS**

- Three functions in a single component
- Just four connections instead of eight
- Optimal hydraulic balance between primary and secondary pumps
- Spirotube guarantees minimal fluid mixing and thus the best temperature differential
- Real, active deaeration and dirt separation
- Even the tiniest air bubbles and dirt particles are separated and removed
- Constant low pressure drop
- Compact design and limited build height, thanks to the Spirotube
- Exceptional guarantee

**SPIROCROSS HYDRAULIC DEAERATORS AND DIRT SEPARATORS**

A good hydraulic balance is highly important for HVAC and process systems with separated circuits or several groups and pumps.

The effective removal of air and dirt also contributes towards the achievement of optimum system performance. Hydraulic balancing and air and dirt separation are combined in the SpiroCross.

Thanks to the combination of 3 functions in 1, savings will not only be made in purchasing but also in space, installation and maintenance costs.

**DEAERATION AND DIRT SEPARATION IN PERFECT BALANCE**

The unique Spirotube ensures active deaeration and dirt separation in a very compact design and guarantees a perfect balance with minimal fluid mixing. Although the Spirotube can trap the smallest microbubbles and dirt particles, it has a very open structure which means that the SpiroCross does not clog up. Flow and pressure drop are not affected by the accumulated dirt, since it is collected outside the main flow.

**HOW DOES A HYDRAULIC SEPARATOR WORK?**

A hydraulic separator balances the differences in volumetric flow between a primary circuit (supply =  $Q_p$ ) and a secondary circuit (demand =  $Q_s$ ). Three operating situations can occur if a hydraulic separator is installed in a system and these are shown below and to the right.

Situation 1:  $Q_p = Q_s$   $\Delta T_p = \Delta T_s$   $T_2 = T_4$ Situation 2:  $Q_p < Q_s$   $\Delta T_p > \Delta T_s$   $T_2 = T_4$ Situation 3:  $Q_p > Q_s$   $\Delta T_p < \Delta T_s$   $T_1 = T_3$

ACCESSORIES

**SPIROCROSS®** – Accessories for steel solution

Art.-No.	Description	Suitable for
TBX050	Insulation Set SpiroCross Steel	XC050F/L
TBX065	Insulation Set SpiroCross Steel	XC065F/L
TBX080	Insulation Set SpiroCross Steel	XC080F/L
TBX100	Insulation Set SpiroCross Steel	XC100F/L
TBX125	Insulation Set SpiroCross Steel	XC125F/L
TBX150	Insulation Set SpiroCross Steel	XC150F/L

SPIROCROSS  
INSULATION SET

VACUUM DEGASSING AND PRESSURISATION

# SPIROPRESS®

Correct pressure  
throughout the system

Reduced  
operating costs

Air levels reduced to  
absolute minimum

Maximised efficiency  
of all system components

Reduction of malfunction  
and downtime

# SPIROPRESS®

## BENEFITS OF SPIROPRESS

The Spirotech approach, combining deaeration and dirt separation along with pressurisation will render the following benefits:

- A correctly designed system
- Increase System Efficiency
- Dramatically reduce maintenance costs for Pump Seals, Fouling of Control Valves, Blockages in Heat Exchangers

## SPIROPRESS VACUUM DEGASSING AND PRESSURISATION

SpiroPress enables automatic pressure monitoring and control and provides degassed makeup water. Adding a pressurisation solution to our established degassing products makes it possible to provide a total, integrated system care solution.

Today's highly energy-efficient heating and cooling systems offer optimal performance with air-free water. Most issues within HVAC systems are closely related to air being introduced into the system as a result of pressurisation issues. A poorly designed, installed or maintained pressurisation system can lead to negative pressures around the circuit. The introduction of oxygen through leaks or by refilling with undegassed, mostly hard water also makes corrosion inhibitors significantly less effective.

## HYDRONIC STABILITY

The use of fluid as the heat-transfer medium in heating and cooling systems is a dynamic process. Hydronic stability means the fluid can transfer heat or cold at any location in the system, at any given time. Pressurisation is a key factor in hydronic stability.

## WIDE RANGE OF SOLUTIONS

SpiroPress covers a wide range of installations, from the most basic setup to the most extended, complicated system. All units are used to provide both full vacuum degassing of the system water. Makeup water is degassed prior to system entry, offering substantial long-term protection. Not just for the commissioning phase, but for the entire lifetime of the system. SpiroPress can dramatically increase performance and avoid premature failure of major system components and, together with dirt separation and degassing, provide a system that performs the way it has been designed to delete.

**SPIROPRESS MULTICONTROL**

- For use in systems generally with large volumes and high pressures and also if space is limited and traditional fixed gas cushion type vessels are difficult to accommodate.
- The SpiroPress MultiControl range offers a multitude of units to cover all system volumes and pressures.
- Special units are also available upon request for systems operating at higher pressures.

**SPIROPRESS CONTROL**

- For use in systems generally up to (but not limited to) 300 m<sup>3</sup>. The SpiroPress Control range offers a choice of 4 units to cover the pressure range from 1 bar to 16 bar.
- All units are used to provide both full vacuum degassing of the system water and make-up water is also degassed prior to entering the system offering substantial long-term protection of the system.

**SPIROPRESS FILL**

- Primarily for use in smaller systems with relatively low pressures and volumes.
- The SpiroPress Fill range offers the choice of a simple mechanical auto-fill unit or a wall-hung pumped fill unit.

ETCM-D10.8-15.7-twin	2.0–15.7 bar
ETCM-D9.4-23.5-twin	2.6–23.5 bar
ETCM-D18.2-14.9-twin	2.0–14.9 bar
ETCM-D20.0-23.5-twin	2.6–23.5 bar

**SPIROPRESS®**

## Solution

**SPIROPRESS® – TopControl Modular – MAXI, Double pump 2 x 100 %, Single valve 1 x 100 %**

Art.-No.	Description	max. op. pressure
ETCM-M5.4-15.7		max. op. pressure 2.0–15.7 bar
ETCM-M4.7-23.5		max. op. pressure 2.6–23.5 bar
ETCM-M9.1-14.9		max. op. pressure 2.0–14.9 bar
ETCM-M10.0-23.5		max. op. pressure 2.6–23.5 bar

**SPIROPRESS® – TopControl Modular – MAXI/TWIN, Double pump 2 x 100 %, Double valve 2 x 100 %**

ETCM-M5.4-15.7-twin		max. op. pressure 2.0–15.7 bar
ETCM-M4.7-23.5-twin		max. op. pressure 2.6–23.5 bar
ETCM-M9.1-14.9-twin		max. op. pressure 2.0–14.9 bar
ETCM-M10.0-23.5-twin		max. op. pressure 2.6–23.5 bar

**SPIROPRESS® – MultiControl COOL**

EMCC-S1-4.0	MultiControl COOL SOLO	max. op. pressure 1.0–4.0 bar
EMCC-S1-5.6	MultiControl COOL SOLO	max. op. pressure 2.0–5.6 bar
EMCC-D1-4.0	MultiControl COOL DUO	max. op. pressure 1.0–4.0 bar
EMCC-D1-5.6	MultiControl COOL DUO	max. op. pressure 2.0–5.6 bar
EMCC-M1-4.0	MultiControl COOL MAXI	max. op. pressure 1.0–4.0 bar
EMCC-M1-5.6	MultiControl COOL MAXI	max. op. pressure 2.0–5.6 bar

**SPIROPRESS® – MultiControl COOL**

Art.-No.	Description	Additional description
EMCC-G125	MultiControl COOL expansion vessel	with level measurement
EMCC-G200	MultiControl COOL expansion vessel	with level measurement
EMCC-G300	MultiControl COOL expansion vessel	with level measurement
EMCC-G500	MultiControl COOL expansion vessel	with level measurement
EMCC-Z125	MultiControl COOL supplementary vessel	only overflow line, without level measurement
EMCC-Z200	MultiControl COOL supplementary vessel	only overflow line, without level measurement
EMCC-Z300	MultiControl COOL supplementary vessel	only overflow line, without level measurement
EMCC-Z500	MultiControl COOL supplementary vessel	only overflow line, without level measurement
EMCC-N1	MultiControl COOL post-feed module	quantity controlled feed, ½"
EMCC-Z	MultiControl COOL Connection Set	MCC-Z to MCC-G and MCC-Z to MCC-Z
EMCC-G	MultiControl COOL Connection Set	MCC-G to MCC-_1, suction and overflow line

**SPIROPRESS® – MultiControl AUTOFILL**

EMCA-S1-2.7	MultiControl AUTOFILL SOLO	filling pressure up to max. 2.7 bar
EMCA-S1-5.2	MultiControl AUTOFILL SOLO	filling pressure up to max. 5.2 bar
EMCA-G640	MultiControl AUTOFILL expansion vessel MCA-G640	
EMCA-G1000	MultiControl AUTOFILL expansion vessel MCA-G1000	
E55390	MultiControl AUTOFILL Connection Set	MCA-G to MCA-_1, suction and circulation line
E55391	MultiControl AUTOFILL Connection Set	MCA-_1 instead of MCF-1/MCC-N1

**SPIROPRESS® – SpiroPress Fill**

MR0650	SpiroPress Fill 230 V/50	
--------	--------------------------	--

# SPIROPRESS®

Solution

## SPIROPRESS® – Expansion vessel for MultiControl Kompakt

Art.-No.	Volume	Description
EMCB-Z75	volume 75 litre	only overflow line, without level measurement
EMCB-Z125	volume 125 litre	only overflow line, without level measurement
EMCB-Z200	volume 200 litre	only overflow line, without level measurement
EMCB-Z300	volume 300 litre	only overflow line, without level measurement
EMCB-Z500	volume 500 litre	only overflow line, without level measurement

## SPIROPRESS® – Expansion vessel for MultiControl Modular and TopControl Modular

EP0200R	volume 200 litre	elko-mat EG 200M
EP0300R	volume 300 litre	elko-mat EG 300M
EP0500R	volume 500 litre	elko-mat EG 500M
EP0800R	volume 800 litre	elko-mat EG 800M
EP1000R	volume 1,000 litre	elko-mat EG 1000M
EP1500R	volume 1,500 litre	elko-mat EG 1500M
EP2000R	volume 2,000 litre	elko-mat EG 2000M
EP2500R	volume 2,500 litre	elko-mat EG 2500M
EP3000R	volume 3,000 litre	elko-mat EG 3000M
EP4000R	volume 4,000 litre	elko-mat EG 4000M
EP5000R	volume 5,000 litre	elko-mat EG 5000M
EPX100R	volume 10,000 litre	elko-mat EG 10000M

## SPIROPRESS® – Supplementary vessels for MultiControl Modular and TopControl Modular

EP0200RS	volume 200 litre	elko-mat EGZ 200M
EP0300RS	volume 300 litre	elko-mat EGZ 300M
EP0500RS	volume 500 litre	elko-mat EGZ 500M

EP1500RS	volume 1,500 litre	elko-mat EGZ 1500M
EP2000RS	volume 2,000 litre	elko-mat EGZ 2000M
EP2500RS	volume 2,500 litre	elko-mat EGZ 2500M
EP3000RS	volume 3,000 litre	elko-mat EGZ 3000M
EP4000RS	volume 4,000 litre	elko-mat EGZ 4000M
EP5000RS	volume 5,000 litre	elko-mat EGZ 5000M
EPX100RS	volume 10,000 litre	elko-mat EGZ 10000M

## SPIROPRESS® – Intermediate cooling vessel for EV models

Art.-No.	Description	
ET0100T1	elko-mat EV 100-10-110	intermediate cooling vessel, PN10, 110 °C
ET0150T1	elko-mat EV 150-10-110	intermediate cooling vessel, PN10, 110 °C
ET0200T1	elko-mat EV 200-10-110	intermediate cooling vessel, PN10, 110 °C
ET0350T1	elko-mat EV 350-10-110	intermediate cooling vessel, PN10, 110 °C
ET0500T1	elko-mat EV 500-10-110	intermediate cooling vessel, PN10, 110 °C
ET0750T1	elko-mat EV 750-10-110	intermediate cooling vessel, PN10, 110 °C
ET1000T1	elko-mat EV 1000-10-110	intermediate cooling vessel, PN10, 110 °C
ET1500T1	elko-mat EV 1500-10-110	intermediate cooling vessel, PN10, 110 °C
ET2000T1	elko-mat EV 2000-10-110	intermediate cooling vessel, PN10, 110 °C
ET3000T1	elko-mat EV 3000-10-110	intermediate cooling vessel, PN10, 110 °C

VESSELS

**SPIROPRESS®** – Expansion modules and accessories for MultiControl and TopControl

Art.-No.	Description	
EMCPB	MultiControl Busmodul Profibus Profibus-Standard DP-V0	
EMCPN	MultiControl Busmodul Profinet Profinet IO-Device	
EMCMO	MultiControl Busmodul Modbus RTU RS485	
EMCWE	MultiControl Webmodul ethernet 100 Mbps, WLAN GH2.4 z 802.11n	
EMCSM	MultiControl SMS-Modul	
EMCAM	MultiControl Expansion module. "analogue remote signaling"	
EMCBM	MultiControl Expansion module. "binary remote message"	
EMCBMR	MultiControl Expansion module. "binary remote messages & remote acknowledgment"	
EMCF-1	MultiControl post-feed module MCF-1. Quantity controlled feed ½"	
EMCF-3	MultiControl post-feed module MCF-3. Quantity controlled feed ¾"	
TMA05	Backflow preventer with controllable low pressure zone (½" IG)	
TMA06	Backflow preventer with controllable low pressure zone (¾" IG)	
EMCB-ZB	MultiControl kompakt Bypass-Set	Bypass Kit for MultiControl Kompact and Modular 1/PN10
E51950	MultiControl contact temperature sensor. Incl. clamping tape (diameter 15–40 mm)	
E51951	MultiControl cable temperature sensor. Cable 10 m. incl. immersion sleeve G½". PN10	
EMAE-1	MultiControl degassing module MAE-1	Low pressure degassing, ½", suitable for MCM
EMCB-ZC	MultiControl Kompact connection set MCB-Z. Connection of MCB-Z to MCK (extension)	
E51995	drip tray, 840 x 840, 3 spacer, drain connection 50 with siphon	
E51996	drip tray, 1200 x 800, 3 spacer, drain connection 50 with siphon	
EPCF-1	PicoControl post-feed module ½"	post-feed drinking water systems
E51910	MultiControl equipment house made of metal	MultiControl Feed temperature sensor incl. Tensioning band (diameter 15–40 mm)

**SPIROPRESS®** – MWE-module demineralisatie voor suppletiewater

EMVE2	elko-mat MVE 2 Module demineralisation supplementary water
EMWE6	elko-mat MWE 6 Module water softening make-up water
ER-MWE28	elko-mat R-MWE 28 Module water softening, regenerating
E51645	Replacement cartridge for VE ion exchanger to elko-mat MVE 2 and MVE 4
E51614	Replacement cartridge for ion exchanger, elko-mat MWE 6 and MWE 12
E51615	Replacement filter insert for fine filters to elko-mat eder MWE, MVE and R-MWE
E51616	Filter bowl keys to elko-mat MWE 6 and MWE 12
E51617	Total hardness test kit elko-mat GH100

**SPIROPRESS® – Diaphragm safety valve****ACCESSORIES**

Art.-No.	Description
E50111	Diaphragm safety valve ½"- 3 bar, max. heating capacity: 50 kW
E50112	Diaphragm safety valve ½"- 3 bar, max. heating capacity: 50 kW
E50113	Diaphragm safety valve ¾"- 3 bar, max. heating capacity: 100 kW
E50512	Diaphragm safety valve ½"- 6 bar, max. heating capacity: 75 kW
E50513	Diaphragm safety valve ¾"- 6 bar, max. heating capacity: 150 kW
E52001	Diaphragm safety valve 1"-3 bar, max. heating capacity: 354 kW
E52002	Diaphragm safety valve 1"-4 bar, max. heating capacity: 436 kW
E52003	Diaphragm safety valve 1"-5 bar, max. heating capacity: 515 kW
E52004	Diaphragm safety valve 1"-6 bar, max. heating capacity: 591 kW
E52005	Diaphragm safety valve ½"-3 bar, max. heating capacity: 729 kW
E52006	Diaphragm safety valve ½"-4 bar, max. heating capacity: 898 kW
E52007	Diaphragm safety valve ½"-5 bar, max. heating capacity: 1,060 kW
E52008	Diaphragm safety valve ½"-6 bar, max. heating capacity: 1,216 kW
E52009	Diaphragm safety valve ¾"-3 bar, max. heating capacity: 949 kW
E52010	Diaphragm safety valve ¾"-4 bar, max. heating capacity: 1,168 kW
E52011	Diaphragm safety valve ¾"-5 bar, max. heating capacity: 1,378 kW
E52012	Diaphragm safety valve ¾"-6 bar, max. heating capacity: 1,582 kW
E52013	Diaphragm safety valve 2"-3 bar, max. heating capacity: 1,322 kW
E52014	Diaphragm safety valve 2"-4 bar, max. heating capacity: 1,626 kW
E52015	Diaphragm safety valve 2"-5 bar, max. heating capacity: 1,920 kW
E52016	Diaphragm safety valve 2"-6 bar, max. heating capacity: 2,203 kW
E52017	Diaphragm safety valve 1"-8 bar, max. heating capacity: 743 kW
E52018	Diaphragm safety valve ½"-8 bar, max. heating capacity: 1,529 kW
E52019	Diaphragm safety valve ¾"-8 bar, max. heating capacity: 1,989 kW
E52020	Diaphragm safety valve 2"-8 bar, max. heating capacity: 2,770 kW
E52021	Diaphragm safety valve 1"-10 bar, max. heating capacity: 889 kW
E52022	Diaphragm safety valve ½"-10 bar, max. heating capacity: 1,830 kW
E52023	Diaphragm safety valve ¾"-10 bar, max. heating capacity: 2,380 kW
E52024	Diaphragm safety valve 2"-10 bar, max. heating capacity: 3,315 kW

**SPIROPRESS®** – Expansion vessel with fixed pressure and butyl membrane

Art.-No.	Description
EV0002FP06	Expansion vessel with fixed pressure and butyl membrane
EV0008FP06	Expansion vessel with fixed pressure and butyl membrane
EV0012FP06	Expansion vessel with fixed pressure and butyl membrane
EV0018FP06	Expansion vessel with fixed pressure and butyl membrane
EV0024FP06	Expansion vessel with fixed pressure and butyl membrane
EV0035FP06	Expansion vessel with fixed pressure and butyl membrane
EV0060FP06	Expansion vessel with fixed pressure and butyl membrane
EV0080FP06	Expansion vessel with fixed pressure and butyl membrane
EV0100FP06	Expansion vessel with fixed pressure and butyl membrane
EV0150FP06	Expansion vessel with fixed pressure and butyl membrane
EV0200F	Expansion vessel with fixed pressure and butyl membrane
EV0250F	Expansion vessel with fixed pressure and butyl membrane
EV0300F	Expansion vessel with fixed pressure and butyl membrane
EV0450F	Expansion vessel with fixed pressure and butyl membrane

**SPIROPRESS®** – Expansion vessel with replaceable EPDM bladder

Art.-No.	Description
EV0750REP10	Expansion vessel with replaceable EPDM bladder
EV1000REP10	Expansion vessel with replaceable EPDM bladder
EV1500REP10	Expansion vessel with replaceable EPDM bladder
EV2000REP10	Expansion vessel with replaceable EPDM bladder
EV3000REP10	Expansion vessel with replaceable EPDM bladder
EV0100REP16	Expansion vessel with replaceable EPDM bladder
EV0150REP16	Expansion vessel with replaceable EPDM bladder
EV0200REP16	Expansion vessel with replaceable EPDM bladder
EV0300REP16	Expansion vessel with replaceable EPDM bladder
EV0500REP16	Expansion vessel with replaceable EPDM bladder
EV0750REP16	Expansion vessel with replaceable EPDM bladder
EV0850REP16	Expansion vessel with replaceable EPDM bladder
EV1500REP16	Expansion vessel with replaceable EPDM bladder
EV2000REP16	Expansion vessel with replaceable EPDM bladder
EV3000REP16	Expansion vessel with replaceable EPDM bladder
EV0050REP25	Expansion vessel with replaceable EPDM bladder
EV0100REP25	Expansion vessel with replaceable EPDM bladder
EV0150REP25	Expansion vessel with replaceable EPDM bladder
EV0200REP25	Expansion vessel with replaceable EPDM bladder
EV0300REP25	Expansion vessel with replaceable EPDM bladder
EV0500REP25	Expansion vessel with replaceable EPDM bladder
EV0850REP25	Expansion vessel with replaceable EPDM bladder
EV1000REP25	Expansion vessel with replaceable EPDM bladder
EV1500REP25	Expansion vessel with replaceable EPDM bladder
EV2000REP25	Expansion vessel with replaceable EPDM bladder
EV3000REP25	Expansion vessel with replaceable EPDM bladder

**SPIROPRESS® – Safety expansion vessel – series N (3 bar)**

Art.-No.	Description
<b>EVN4</b>	elko-flex N4
<b>EVN8</b>	elko-flex N8
<b>EVN12</b>	elko-flex N12

<b>EVU240-10</b>	elko-flex U240-10	240 litre, 10 bar
<b>EVU300-10</b>	elko-flex U300-10	300 litre, 10 bar

**SPIROPRESS®** – Safety expansion vessel – series Solar (6 bar) for solar installations

Art.-No.	Description
EVSolar18	elko-flex Solar 18
EVSolar25	elko-flex Solar 25
EVSolar35	elko-flex Solar 35
EVSolar50	elko-flex Solar 50
EVSolar90	elko-flex Solar 90
EVSolar120	elko-flex Solar 120
EVSolar200	elko-flex Solar 200
EVSolar300	elko-flex Solar 300

**SPIROPRESS®** – Safety expansion vessel – series San (10 bar) for drinking water in non-flowed design

EVSan2	elko-san San 2	2 litre, 10 bar
EVSan15	elko-san San 15	15 litre, 10 bar
EVSan20	elko-san San 20	20 litre, 10 bar
EVSan30	elko-san San 30	30 litre, 10 bar
EVSan60	elko-san San 60	60 litre, 10 bar
EVSan120	elko-san San 120	120 litre, 10 bar
EVSan180	elko-san San 180	180 litre, 10 bar
EVSan240	elko-san San 240	240 litre, 10 bar
EVSan300	elko-san San 300	300 litre, 10 bar

**SPIROPRESS®** – Safety expansion vessel – series San (10 bar) for drinking water in flow-through design

EVSan20D	elko-san San 20D	20 litre, 10 bar
EVSan30D	elko-san San 30D	30 litre, 10 bar
EVSan90D	elko-san San 90D	90 litre, 10 bar
EVSan120D	elko-san San 120D	120 litre, 10 bar
EVSan60D	elko-san San 60D	60 litre, 10 bar
EVSan300D	elko-san San 300D	300 litre, 10 bar
EVSan240D	elko-san San 240D	240 litre, 10 bar
EVSan180D	elko-san San 180D	180 litre, 10 bar

**SPIROPRESS®** – Safety expansion vessel – series C (3 bar) with replaceable membrane

EVC600	elko-flex C600	600 litre, 3 bar
EVC800	elko-flex C800	800 litre, 3 bar
EVC1000	elko-flex C1000	1,000 litre, 3 bar

**SPIROPRESS®** – Safety expansion vessel – series CV (5 bar) with replaceable membrane

EVCV120	elko-flex CV120	120 litre, 5 bar
EVCV180	elko-flex CV180	180 litre, 5 bar
EVCV250	elko-flex CV250	250 litre, 5 bar
EVCV330	elko-flex CV330	330 litre, 5 bar
EVCV600	elko-flex CV600	600 litre, 5 bar

**SPIROPRESS®** – Accessories for expansion vessels

E50110	maintenance unit ¾" a/a, elko-flex WE ¾" a/a
E50100	Set of 2 maintenance units ¾" a/a, elko-flex WE ¾" a/a
E50207	maintenance unit 1" a/i, elko-flex WE 1" a/i
E50200	Set of 2 maintenance units 1" a/i, elko-flex WE 1" a/i
E50307	maintenance unit ¾" a/i, elko-flex WE ¾" a/i
E50120	Digital test gauge with display – test range: 0-9 bar

DEMINERALIZATION

**SPIROPURE®**

Maintains and improves system water quality

Optimises efficiency of the total installation or process

Supports functioning of other Spirotech solutions

Quick and easy installation

**SPIROPURE®** – Filling stations for demineralization

## SPIROPLUS – PROTECTION FROM THE INSIDE

SpiroPlus products are developed specifically for use in heating, cooling and process installations. Combined with our first class hardware, SpiroPlus products improve and maintain the quality of the installation fluid and the efficiency of the entire installation or process.

### SPIROPLUS FLUSHING AGENTS AND ADDITIVES

Today's equipment is more sensitive to the make-up and quality of system water. Many manufacturers are even specifying water quality requirements as a precondition for their guarantees.

SpiroPlus flushing agents and additives are designed to bring and keep system fluid and the system itself in top condition. Pressurisation is optimised and potential deaeration and dirt separation problems are solved and prevented in both existing and newly constructed systems. Rules, regulations and preferences concerning additives for installation fluids are changing. An important goal is to improve the total system efficiency and by doing that, to reduce energy consumption. Another reason is that modern equipment is much more sensitive to the composition and the quality of the system fluid and the effects of it. A number of boiler manufacturers even set requirements regarding the fluid quality connected to their guarantee conditions.

### DEMINERALISATION OF HEATING WATER

Demineralisation of heating water not only effectively prevents hardness deposits in the heating system, it also helps prevent corrosion. However, unfavourable pH changes that can occur after system commissioning are often underestimated. This particularly applies if the pH value needs to remain within a narrow range, as with aluminium materials (8.2–8.5). All Spirotech filling equipment and refilling stations use a special mixed-bed resin. The resin not only removes residual hardness and dissolved salts from the heating water, it also stabilises the pH. This avoids the need to check the heating water after 8 to 12 weeks.

### GUARANTEED SYSTEM FLUID QUALITY

The SpiroPlus range offers flushing agents for specific actions as well as additives that remain active inside an installation. Whether you're cleaning a system prior to installation, protecting it from frost, or removing dirt, contaminants, calcium, air or corrosion, Spirotech has a solution. The full line of SpiroPlus fluids includes a mild cleaner, power cleaner (both pH-neutral), lime cleaner, sealant, protector and a wide range of anti freeze and glycol mixtures. All these product facilitate quality improvement and preservation of fluid quality. SpiroPlus Protector and SpiroPlus AntiFreeze HC even exceed the EU REACH requirements which have been adopted to protect human health and the environment.

We also develop custom additives and fluids, depending on the requirements for a specific system or process. Experts working at our specialised lab can offer you the best possible advice in every situation. Spirotech offers an extensive range of solutions for system fluid analysis and conditioning in HVAC and process systems. This includes accessories, additives and advice targeted at reducing faults, wear and maintenance as well as maximising system performance and lower energy consumption.

# SPIROCARE® – Analysis and advice

As the leading expert in system water quality, Spirotech offers an easy to use analysis service that provides installers, homeowners, local authorities and housing associations with professional lab verifications.

#### MAKING ANALYSIS EASY AND VALUABLE

SpiroCare ProLab Analysis is an easy-to-use kit for collecting water samples and system fluid information. Sample shipment costs, analysis and report creation are all included in the purchasing price. Select your language, fill in the printed or online form and send your samples to Spirotech's specialised laboratory in the prepaid envelope provided. After receipt of the samples, results of the analysis sent by email within a few working days, allowing rapid and efficient continuation of work on projects. Spirotech is dedicated to ensuring reliable and enduring performance, so the report does not only include the water analysis, but also proposes possible actions or adaptations. If required, specialised analysis and custom advice are available. SpiroCare ProLab Analysis can be used to check water quality during boiler or radiator replacement, as a pre- or post-flush check or as a status checkup.

REPORT

Furthermore, SpiroCare ProLab Analysis makes guarantee application procedures easier, as an increasing number of manufacturers require water quality analysis to be carried out before issuing a guarantee.

## VISIT OUR WEBSITE AND

## FIND THE RIGHT SOLUTION

Heating, cooling and air conditioning systems are complex, especially when integrated with other systems and processes, making fault-finding, analysis and problem solving especially challenging. Spirotech's experts would like to share their insights and offer an overview of common symptoms, causes and remedies.

### Maximising Performance for You

Spirotech is the leading expert in system water quality. We're a family-owned company with over 60 years of experience in developing solutions to prevent and remove air and dirt in HVAC and process systems, helping save energy, increase comfort, reduce wear and tear and maximises uptime. Our proven reliable standard and customised solutions boost performance and protect investments. With our partners, suppliers and investors we create value with quality solutions in residential and non-residential buildings as well as industrial processes. Spirotech is represented by an extensive network of selected importers in over 70 countries.
